

Perhaps T1-2b reduced crossing over between zb_4 and P in Brink's data. The Wisconsin data show rather more crossing over between ts_2 and P than reported by Emerson.

This region of chromosome 1, therefore, may be mapped as follows:

$zb_4 - 4 - ts_2 - 3+ - P - 3 - T1-2b$

D. R. Knott
F. Valentine
R. A. Brink
