**Application of Maize Mutation Types Induced by Space Environment
to Plant Genetic and Breeding**

In authors previous paper it is has been described that the space environment has significant the effects on maize hereditary variation and had obtained the different mutation types (MNL 2005, 79:3, 2006, 80:2; 2007, 81:2). This paper deals with the application of three mutation types to the plant genetic and breeding which are based on the precision scheme of heterotic breeding of the space inducement. 7 mutants belong in three mutation types, i. e. the plant height, ear length and grain types etc, mutation types ,are used as main experimental materials. 19 new lines are developed, and 6 pairs of the superior genetic materials are developed and screened with use for researching the machinery and regularity of space inducement. Among them 11 elite lines (See Table 1-2, Fig. 1) containing the 25%-50% blood relative of space inducement are applied to combined 7 superior hybrids, they have already adopted the regional and yield potential trail for national or province (city, autonomous region) tests and (or) obtained the examination and approval of crop varieties examine and approve committee, to award certificates of new variety right, respectively. The accumulate total for spread areas per year had reached the more 0.8 million Mu (0.053 million ha.). In below papers, ought to discussion the problems of rise combing ability, biochemical component quality for space induced lines and hybrids and construction of the breeding engineering system for space inducement. The prospective on research progress for flight aerospace engineering breeding also ought to mention.

Table 1.The characters and properties for space Environment induced maize mutant

Name Original No.	Mut2	Mut5	Mut6	Mut7	Mut8	Mut9	Mut12
Item	Yi01-4-1 Sp2-3	U8112 Sp3-4	U8112 Sp3-2	U8112 Sp3-3	Me141 SP3-1	Me141 Sp3-2	Zi24 Sp4-5
Plant height (cm)	182.0	157.0	214.0	189.0	220.1	227.3	190.5
Ear height (cm)	75.1	50.1	93.0	82.5	97.2	100.1	88.7
Length of the leaf at the ear site (cm)	75.6	71.3	74.5	70.1	85.1	87.1	74.0
Width of the leaf at the ear site (cm)	9.1	10.0	9.4	9.5	10.0	10.1	10.0
