Chromosome rearrangements

The following rearrangements are being maintained primarily for use in determining the chromosome locations of new traits. All are marked with closely-linked endosperm or seedling traits.

The cytological positions of Inv 2a were determined by Dr. Morgan; those of Inv 9a were determined by Dr. Li. The indicated interchange points of the reciprocal translocations are taken from published work of Dr. Longley.

Inversions

- \* gl<sub>1</sub> Inv 2a (also available with Ch ) 2S.7; 2L.8
- \* wx<sub>2</sub> Inv 9a 9S.7; 9L.9
